

Praisel Richard Ekpenyong

647-472-9928 | ekpenyongpraisel@gmail.com | [GitHub](#) | [LinkedIn](#)

Authorized to work in Canada at Edmonton, Alberta

Education & Certificates

- B.Sc. in Cybersecurity from Miva University, Abuja Status - Graduated 2025
- CompTIA Security+, Microsoft SC-200, TryHackMe SOC Level 1

Projects

SOC Homelab - [GitHub](#)

- Performed alert triage on Windows and Linux endpoints using Splunk, Wazuh, and Active Directory through security monitoring and log analysis to investigate suspicious activity before it disrupted end users.
- Investigated suspicious file activity using Windows Event Logs, Wazuh, and VirusTotal threat intelligence, isolated the affected workstation, and blocked persistence so malware could not spread to other users on the network.
- Traced suspicious network traffic using IDS/IPS, Wireshark, and PCAP analysis on firewall and VPN logs, then isolated affected hosts so the threat could not spread across the network.
- Ran authorized MITRE ATT&CK simulations on virtual machines, triaged alerts in Splunk and Wazuh with log analysis, and updated detection steps so repeat threats were caught before affecting end users.
- Conducted simulated live attacks mapped to MITRE ATT&CK using Caldera, triaged alerts in Splunk and Wazuh with SPL, and updated detection rules so repeat attacks were caught before end users were affected.
- Enriched IOCs with Python and PowerShell using VirusTotal threat intelligence, documented cases in osTicket, and wrote plain-language handoff notes so the next analyst could continue the investigation without restarting from scratch.

Microsoft Azure Homelab - [GitHub](#)

- Built a Microsoft Azure SOC lab with Microsoft Sentinel SIEM, Microsoft Defender for Endpoint on Entra ID workstations, practicing cloud alert triage and incident response the way enterprise security teams work.
- Performed a phishing investigation using python, Microsoft Sentinel and Microsoft Defender for Endpoint, reviewed HTTP/S email headers and endpoint logs through log analysis and isolated the workstation so malware could not spread to other users.

- Responded to a Microsoft 365 password spray using Entra ID logs and KQL in Microsoft Sentinel, revoked the active session, reset the compromised account, and blocked further access to email and file resources so the attacker could not reach sensitive data.
- Tuned a KQL rule in Microsoft Sentinel using VPN logs after a firewall change and reduced false positives to catch real remote access threats instead of chasing noisy alerts after every firewall change.
- Prioritized an alert queue in osTicket, triaged phishing and login alerts before lower-priority firewall noise, and closed tickets by risk so the highest-severity threats were handled first before they affected end user.

Work History

Field/Technical Support at Hava Medical, Abuja, Nigeria

February 2025 to Current

- Provided on-site technical support for hospital medical equipment across multiple facilities and coordinated with clinical and engineering teams so patient care was not interrupted or delayed.
- Explained technical specifications in plain language to non-technical hospital staff during product demonstrations so facilities could adopt new equipment safely without waiting for another engineering visit.
- Prepared invoices and delivery documentation while maintaining accurate inventory records to ensure complete traceability of all orders and transactions.

Freelance Copywriter, Remote

March 2022 to September 2024

- Created research-based content and technical documents while managing multiple project timelines to deliver client assets on time without errors.
- Analyzed audience data to guide content creation, which resulted in a clear increase in user engagement.
- Reviewed all content for errors and accuracy, then wrote daily status reports so the team always knew the current progress and what needed to happen next.
